Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –
(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351

2. Claims 1, 2, 4-6 and 9-16 rejected under 35 U.S.C. 102(e) as being anticipated by Horikoshi et al. (US 2001/0024013 A1)

Horikoshi et al. (US 2001/0024013 A1) Horikoshi et al. al. discloses a transmission mechanism (Fig. 3), of a sheet feeder (Fig.11), located inside of a body (15), a plurality of drive rollers (11 and 12), belt (14), drive rollers drive the belt (paragraph 0134), idler roller (13), elastic member or spring (17), force (paragraph (0090), at least comprising three rollers and a plurality of belts (Fig. 3), driven by a motor (Paragraph 0134), spring (17), plurality of axels (11, 12), shaft (13), elastic member fixed between shaft and body (Fig. 3), paper (P), claimed frictional relationship is inherent, trays rollers Etc. of claim 15 (Fig. 9) and tangency with paper path of claim 16 at (Fig. 4 and 5).

Allowable Subject Matter

3. Claims 3, 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: A transmission mechanism having all of the limitations of claims 1 and 2 in combination with the drive rollers arranged in a triangle, elastic member manufactured together with injection molding and the elastic member is made of plastic is not found nor is sufficient motivation to make the combination found in the art of record.
